

Mobile Access Control System

The Mobile Access Control System from Telaeris is the ideal solution for deploying access control into the field. When you want to control access to multiple critical locations or multiple points of entry but don't want to install permanent access control points, the Mobile Access Control System does the job.

Ideal for access control for:

- ◆ Large and small events such as conventions, concerts, sporting events, where access control is necessary but permanent deployment is unfeasible.
- ◆ Large industrial sites, where permanent access control points are impractical, and employees need to quickly check in and out of particular work areas.

A standard Mobile Access Control System includes:

- ◆ 8 Handheld Access Control sensors, which can be independently assigned
- ◆ Secure wireless Internet connection to a back-end database
- ◆ Battery back-up allowing for uninterrupted use
- ◆ All housed in a easily-secured, weather-resistant cart

Each platform can be customized to fit the particular work environment and user requirements, including:

- ◆ RFID badge readers
- ◆ Bar Code scanners for tickets or badges
- ◆ Biometrics readers
- ◆ Emergency power shutdown

Software solutions can be developed to fit your needs:

- ◆ Badgeholder access control
- ◆ Portable wireless Internet access for supervisors
- ◆ Emergency field access control

For creating user ID badges with photos and RFID tags in the field, use the Mobile Badging System from Telaeris.
