

Visitor & Identity management

Integration insights

Safety and security professionals welcome XPressEntry's ability to verify identity with badges or biometrics, record entries and exits where door readers are not practical, quickly muster employees during an emergency evacuation, perform medical screenings at entry points, and much more.

Handhelds maintain all badge data, facility occupancy information and permissions to quickly verify credentials from anywhere in either online or offline scenarios.

Integration

XPressEntry + AEOS integration puts the power of the AEOS access control system conveniently into handheld readers delivering tremendous flexibility and new physical security functionality.

Functionality

Integration in AEOS enables the following functionalities:

- Badge verification
- Emergency mustering
- Entry/Exit Tracking
- Event management

Badge Verification

XPressEntry rugged handheld readers provide real-time, mobile access control and badge verification at entry points, remote sites, or on-the-go from anywhere. XPressEntry seamlessly integrates with AEOS, pulling identity details from the access control system database to confirm credentials and provide the latest occupancy information.

Emergency Mustering

XPressEntry handheld badge readers keep continuous track of facility occupancy by monitoring the AEOS database. In an emergency evacuation, safety and security professionals can quickly perform roll calls from remote locations, verify that personnel and visitors are safely evacuated, and most importantly, identify anyone missing and their last known location, which can be critical to allow first responders to help save lives.

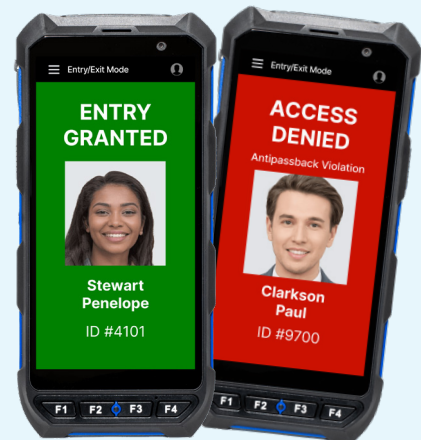

Entry/Exit Tracking

XPressEntry handhelds extend AEOS by securely tracking personnel as they enter or exit areas without fixed readers. Validate credentials at any location, ensure that only authorized personnel gain access, view real-time occupancy data, and maintain compliance in any environment.

Event Management

XPressEntry offers an easy way to monitor attendance and control access to events or trainings using existing employee badges or issued credentials and provides access to reports for compliance.

About Nedap

For us, security isn't just about technology. It's about people and how they live their daily lives. It's about fulfilling your basic human need for security so you feel safe enough to make the most of life and work. In a way, true security is when you don't have to think about it.
